Summary

I am an experienced and dedicated Machine Learning Engineer with a background in Software Engineering. With a Master's degree in Engineering Management focused in Data Analytics and Machine Learning from San Jose State University, I possess a strong academic and professional foundation in the field. Over the past years, I have honed my expertise in Machine Learning while leveraging my 3+ years of experience in Software Engineering. This combination allows me to approach problems with a holistic perspective, understanding both the technical and practical aspects of building robust ML systems. One of my key strengths lies in taking ownership and building end-to-end Machine Learning systems. I thrive on the challenge of developing solutions that not only meet technical requirements but also deliver tangible business value. From data preprocessing and model selection to deployment and monitoring, I am well-versed in the entire ML lifecycle. Beyond technical skills, I place a high value on positive attitude and resilience. I believe that maintaining a positive mindset is crucial in handling challenges and setbacks, both personally and professionally. When faced with pressure, I remain calm and composed, motivating others and fostering a collaborative environment. My solution-oriented mindset enables me to find innovative approaches even in the most challenging projects, and I consistently strive to uplift and encourage my team to achieve our goals. I am passionate about leveraging cutting-edge technologies to solve complex problems and drive meaningful impact. If you are looking for a Machine Learning Engineer who combines technical expertise with a positive and resilient mindset, I would love to connect and explore potential opportunities to contribute to your organization's success.

Experience

iClarity Solutions

Senior AI/ML Engineer
August 2023 - June 2025 (1 year 11 months)
San Ramon, CA

IMPULSE LOGIC

2 years 5 months

Senior Machine Learning Engineer
June 2022 - June 2023 (1 year 1 month)
San Ramon, CA

Machine Learning Engineer
February 2021 - June 2022 (1 year 5 months)

San Jose State University
10 months

Tutor, Engineering Statistics and Analytics
August 2018 - May 2019 (10 months)
San Francisco Bay Area

- Managed and Tutored a class of more than 180 students and served as a peer leader for engineering statistics and analytics.
- Collaborated with faculty on a weekly basis to outline expectations for the curriculum to support students.
- Communicated with the students on a daily basis to resolve issues and help strategize their assignments/projects.

Student Office Assistant
August 2018 - May 2019 (10 months)

Computer Plaza Complete IT solutions
Software Engineer - Freelance
March 2016 - February 2017 (1 year)
Solan, Himachal Pradesh, India

- Optimized and boosted product performance on software development projects which were brought in by the company outsourced by the clientele.

Quexst Solutions Private Limited
Software Engineer (Product)
August 2015 - February 2016 (7 months)
Pune, Maharashtra, India

- Designed and developed 4 e-learning android apps out of which 2 are published on Google Play Store.

- Integrated Google Analytics Service and build reports which yielded significant insights and metric KPIs such as Retention rate, Daily/monthly active users, session length, etc.
- Analyzed and presented weekly reports to the management and business stakeholders to increase product quality and usage.
- Implemented prioritized features, which increased downloads and user engagement by more than 30%.
- Built, deployed, and maintained RESTful web services on MS Azure.
- Followed typical Project Management methods like Agile and Scrum throughout the Software Development Lifecycle (SDLC).
- Led a team of 2 interns who assisted me with android development and Web Server maintenance.

Technologies Used:

Java, Dot Net, MS Azure, Android SDK, Rest APIs, JSON.

Shree Avadhoot Computer Solutions - India

Software Engineer

May 2014 - July 2015 (1 year 3 months)

Jalna Area, India

- Worked on Software Developments - Front End and Back End.
- Written APIs using spring boot and Java.
- Boosted performance and done Minor UI upgrades
- Assisted in Android development.

Technologies used:

Java, Restful web services, Spring boot, Android SDK.

BMC Software

Software Developer Intern

July 2013 - May 2014 (11 months)

Pune

- Collaborated with Scrum team on a daily basis to achieve the goal of the incremental and iterative release of the product.
- Designed and developed a generic mobile application built on BMC's one of the proprietary business solution products called "Remedy 8 - IT Service Management suite".
- Increased efficiency by reducing the time for employees to raise, check status, and to close a ticket.

- Built a generic app in terms of OS platforms (Android, iOS) by using PhoneGap, which made the development process less complex.
- Integrated Google Cloud Messaging service for push notification in the application which made it easy to inform the user when a ticket is raised/processed/closed.

Technologies used:

Java, AR APIs, Restful web services, JSON, HTML5, CSS3, Javascript, DOJO framework, BMC's private network server.

Education

San Jose State University

Master's degree, Engineering Management · (2017 - 2019)

Pune Institute of Computer Technology

Bachelor of Engineering (B.E.), Information Technology · (2010 - 2014)
